Music collaboration system for producers & artists

Comes with a **FREE plugin** and
FREE plan for everybody worldwide!
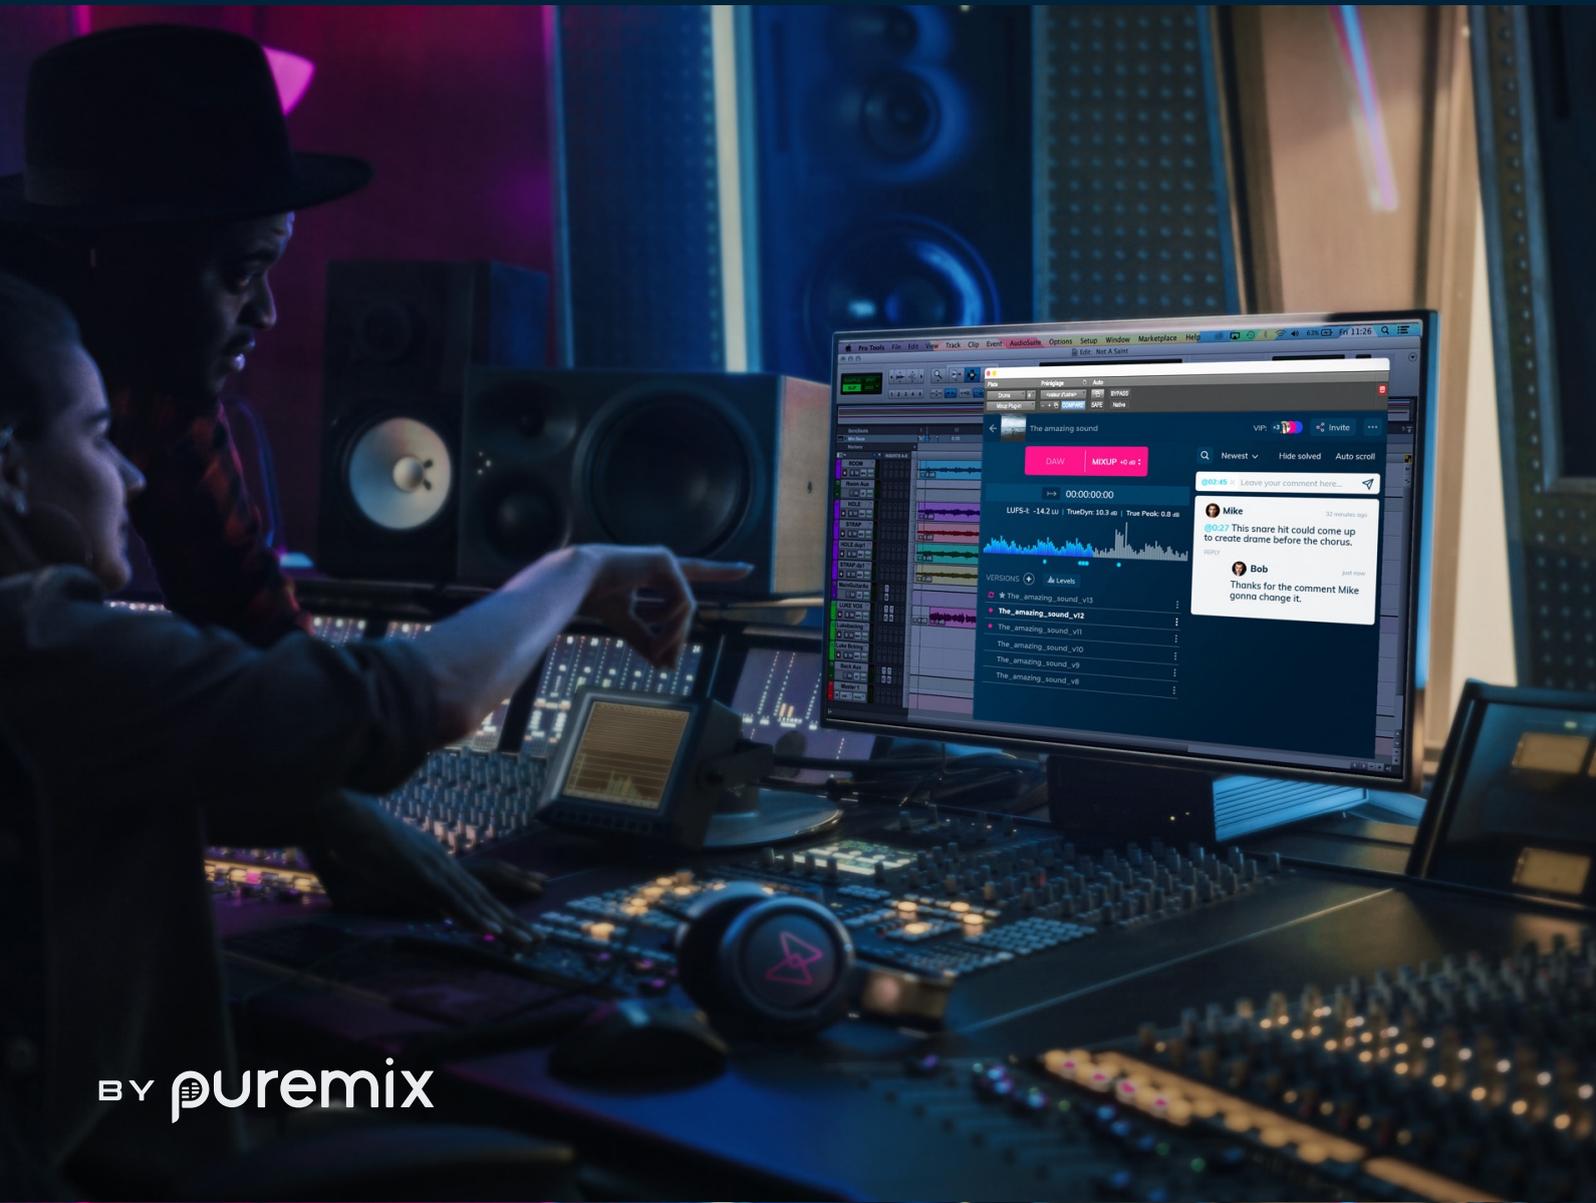

What is Mixup?

Remote audio collaboration tools have evolved quite a bit over the past year.

Mixup.audio aims at facilitating collaboration between studios, clients & band members. The Mixup web app and plugin will significantly speed up their workflow and take their demos & mix to master deliveries.

This service was developed by pureMix (the largest online audio education platform) which leveraged 10 years of experience working with its community of producers and engineers.

Mixup is **the missing link** in the music making process. It's an easy, instant music feedback and delivery system with tricks up its sleeves...

Mixup key features

- ✓ **Free** plan for everyone
- ✓ **Free** plugin
- ✓ Mobile/ desktop / tablet ready (no app to install)
- ✓ Easy access for your guests (no login required, one link for your project)
- ✓ One link sharing for your project, no more email chains
- ✓ Level matching with streaming services
- ✓ Mix versioning & playlists manager
- ✓ HD streaming (.wav 16bits up to 48Khz)
- ✓ Custom download manager for final delivery
- ✓ Enhanced security (password protection, unique link per guest)
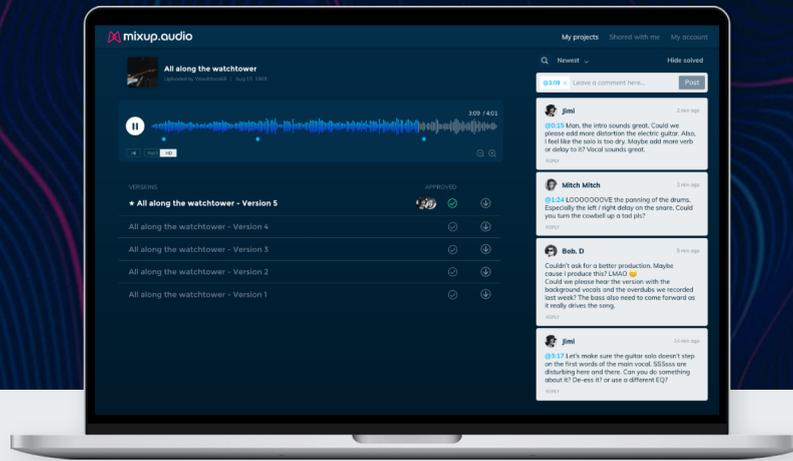

Music commenting & delivery made easy

Shoot music to the cloud by a simple **drag and drop**, guests can then instantly listen to the music anywhere in any browser, any computer or phone. They can make comments on the timeline while they listen: ''raise the vocals here'', ''raise drums there'' etc...

People can track progress by adding the new version of the track and get notifications. Plus the whole interface permits to organize projects by playlists.

Mixup makes it easy for your guests to comment in a zero friction environment: one email, one link, one click-instant-play, mobile & desktop ready, no login required.

A FREE DAW plugin

Mixup is not just a website, it's also a **FREE AAX, AU and VST plugin** that lets you manage music sharing, versioning, commenting and playlisting directly from any DAW.

Add it to your mix bus and you are good to experience all Mixup features:
- Compare older versions to your current DAW mix in real time
- Transport control your DAW from the Mixup plugin timeline (ReWire protocol)
- Reply to your guests from the plugin
- Mark comments as solved
- Upload new versions directly from your DAW
- Invite new guests from the plugin
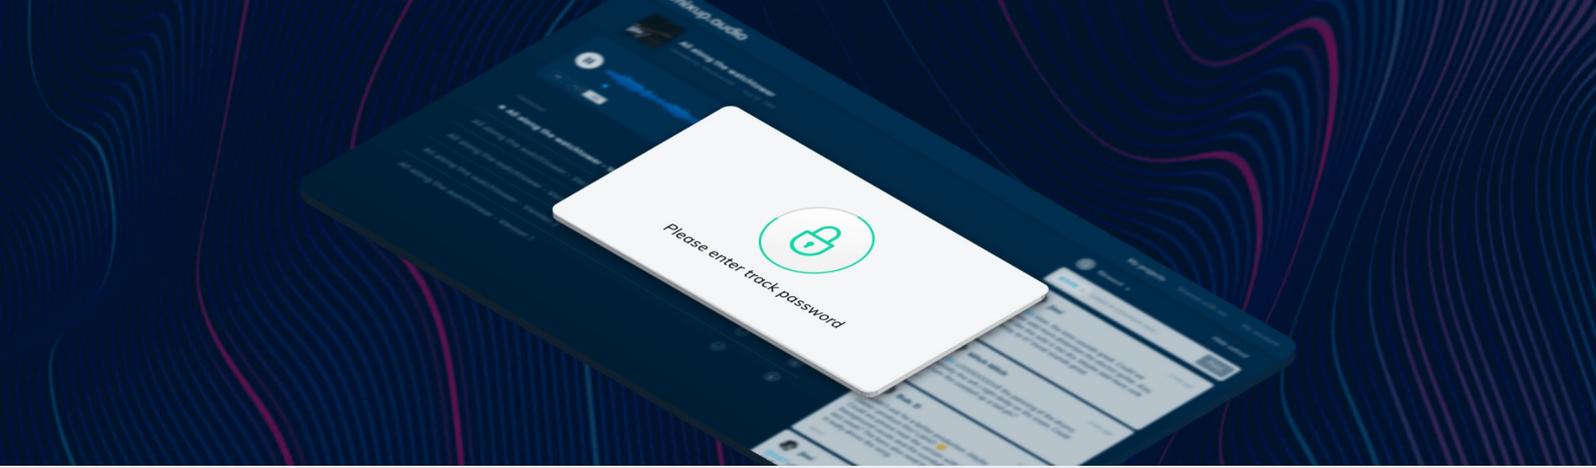

Safely compare between versions & streaming services

Mixup let's you match playback levels between your project and streaming or broadcast standards and safely compare your work to published material thanks to his Track level aligner. It lets you keep an edge over the streaming services and match your levels to streaming standards.
When your guests switch back and forth between Mixup and Spotify, Tidal or Youtube they can really get a real world feel for how great your work is. Now that's a fair battle.

The **Track level aligner** also makes sure that your guests are not fooled by levels while comparing your older mix revisions against a louder mastered version.

100% Secured & downloads

Of course, all stored tracks and playlists can be secured via Password protection (Pro plan only) which can be regenerated at will (Pro plan only).

In VIP access mode, you can achieve another level of protection by sending unique & revocable access per guest (Studio plan only).

Throughout the whole project, you can choose to allow .mp3 only downloads of your work in progress and keep high res files for the end.
Once the final versions are approved by your team, you can formalize delivery of the final high res source material in one unique link and one zip file.

Subscription package
